

Telemedicine- Telementoring

The practice of telemedicine is expanding. While clinical practice has been carefully taught for centuries, medical schools have not provided today's physicians with the necessary tools for telemedicine. Telemedicine is a medical profession. While technical issues are part of the field, these have been addressed by the various platforms available. In contrast, medical training in this field has been neglected. Telemedicine should be taught in the same way that all medical techniques and specialties are taught - by doctors to doctors (often termed: learn one, do one, teach one). This can and should be addressed in traditional practical ("hands-on") teaching and mentoring. Educational coaching can and should be addressed in the same traditional way. Tele-education enables us to provide telemedical personalized coaching online ("over the shoulder mentoring").

So what do we offer?

Physicians

You want to begin a telemedicine practice but you have questions:

What is the setting?

- Institution? Private?

What is the subpopulation you want to begin with?

- Geographical area? Subspecialty?
- Patients follow-up only?

What are your medical objectives?

- Need inclusion-exclusion criteria?
- Test your teleservice with standard research tools?

If you need assistance with any of these questions, we

have the motivation and experience to guide you and assist in embarking on this new endeavor!

Medical administrators

You are in charge of integrating telemedicine but you have questions:

Where to begin?

- Specific fields or doctors?
- Mandatory or versus voluntary?

How do you encourage doctors to incorporate telemedicine?

- Motivation and payment

What is important when choosing a platform?

- Critical features and quality assurance

It is important to address medical needs with available services. We can guide you through these initial stages for establishing an effective telemedicine practice.

Medical schools

You want to include telemedicine in the curriculum but you have questions:

What are the main topics to be addressed?

- What are the key abilities for delivering telemedicine?

Would this be frontal teaching or over-the-shoulder?

- What is the professional level you want to attain?

Would this be in medical school or CME?

- Who are the trainees? What is the time limit?

We can help you structure courses, train teachers and deliver telemedicine education according to your needs.

NeuroCan

Begin telemedicine services from the right point.

NeuroCan provides expert telemedicine services.

Enabling global accessible specialist care to anywhere at any time.
